ALLOWANCE

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 21, 2009 has been entered.

Claim Objections

2. The previous objection to claim 14 has been withdrawn in light of Applicant's amendment.

Allowable Subject Matter

3. Claims 1-3 and 6-14 allowed.
4. The following is an examiner's statement of reasons for allowance:
5. Gamberini (US 3059650) discloses a method and apparatus for making cigarettes in continuous rod form. The continuous cigarette making machine includes a

Art Unit: 1791

hopper into which tobacco is deposited. The tobacco is withdrawn by means of a carded drum, against which it is pushed by a conveyor carpet. The machine also includes a rod forming mechanism in which a paper web is continuously drawn off from a reel in a manner well known in the art. The tobacco is deposited on top of the paper, and the rod is severed after being formed.

6. Chard (US 4630618) discloses an apparatus and method of forming a rod of tobacco from two types of tobacco in which two types are stored in a hopper and separated therein by a partition, and deposited on an air pervious conveyor belt so that one type overlies the other type. Chard discloses a timed gate means which interrupts the deposition of the first type of material and allows predetermined amounts of the second type of smoking material to be periodically deposited directly on the belt.

7. Hagemann et al. (US 4685476) discloses an apparatus for supplying particles of tobacco to processing machines. The apparatus includes a shut-off valve, a suction generating device, and a monitoring device that ascertains the difference between the pressure of air in the pneumatic conveyor and the air-collecting chamber of the air separator. The apparatus can also be adjusted to regulate the rate of transport of flowable particulate material as well as the influence of transport in a gaseous carrier medium upon the desirable characteristics of the particulate material and/or of the commodities into which the particulate material is converted.

8. However, the prior art, taken alone or in combination, fail to teach the combination of cutting of supply of the first type of tobacco to the input hopper, unloading the first type of shredded tobacco from the input hopper, channel and forming

Art Unit: 1791

table by activating automatically a deflecting member arranged at an output end of the forming table to deflect a waste stream of shredded tobacco of the first type into container means arranged at the output end of the forming table and by leaving the conveyor of the forming table running, feeding when the input hopper, channel and forming table are completely empty, the second type of shredded tobacco through the supply header, input hopper and forming table by leaving the conveyor of the forming table running, deflecting the second type of shredded tobacco into the container means arranged at the end of the forming table by means of the deflecting member until the forming table is completely full, and deactivating automatically the deflecting member when the regular production using the second type of shredded tobacco is ready to be started.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

9. Applicant's arguments on pages 6-9 of the amendment filed August 21, 2009, with respect to claims 1-3 and 6-14 have been fully considered and are persuasive. The 103 rejection of claims 1-3 and 6-14 has been withdrawn.
